Effect of drip and flood irrigation on tomato yield (sample data)
Authors: A. Example, B. Sample. Year: 2024. Journal of Sample Agronomy.
Abstract. We compared drip and flood irrigation in a 12 plot field trial.
Mean yield was 41.2 t/ha under drip and 36.8 t/ha under flood irrigation.
Limits: one season, one site, 12 plots. Results may not transfer to other soils.
